PREFACE

This guide was produced by the Center on Instruction for technical assistance providers and others who work with state education leaders to improve reading achievement among elementary school students. It describes a suite of *Student Center Activities (SCAs)* designed to offer K–5 classroom teachers a wide range of activities that can engage students in differentiated reading activities during small-group work in the classroom. The entire suite of activities and extensive professional development materials, including video clips, may be downloaded from the Florida Center for Reading Research (FCRR) website, <http://www.fcrr.org/Curriculum/SCAindex.htm>. This site contains a flexible search tool, www.fcrr.org/SCASearch/, for locating activities by reading component or grade level.

Technical assistance providers could use the *Student Center Activities* to:

- facilitate state-level discussions about resources to support improved reading instruction;
- use the *SCAs* as examples of differentiated reading instruction at the elementary level;
- identify the *SCAs* as a free resource that states can offer to districts and schools;
- offer to facilitate alignment of the *SCAs* to a state's standards.

Although these activities were prepared for use in Florida schools, they may be used in any elementary school context. They are consistent with scientific research on reading instruction and can be integrated easily into any core reading program that is based on the five essential components of reading (phonological/phonemic awareness, phonics, fluency, vocabulary, and comprehension). Elementary school teachers in Florida and other states have adopted the *Student Center Activities* variously in general education classrooms, as interventions, and in special education classes; middle school teachers have used the materials in intervention and special education classes.

Using Student Center Activities to Differentiate Reading Instruction and other materials on instruction are available at the Center on Instruction website, www.centeroninstruction.org.

INTRODUCTION

Students differ in their English proficiency and levels of academic readiness. Each student also brings a unique mix of personal history and interests to the classroom. To engage each student in active learning appropriate to his or her needs, the most effective instruction is differentiated, that is, responsive to variances among students (Tomlinson, 2001).

Differentiated instruction is a powerful way to expand student learning. This guide looks at the research behind the concept, explains the optimal use of *Student Center Activities*, and describes the many elements of the *Student Center Activities* suite on the FCRR website.

A classroom organized to facilitate differentiated instruction will provide a variety of learning opportunities that engage students at their optimal learning levels. For example, after a whole-group reading lesson, a classroom teacher may work with individual students or a small group of students with similar needs while other students work independently, in pairs, or in small groups at student centers.

The Florida Center for Reading Research (FCRR) has published a suite of *Student Center Activities* at <http://www.fcrr.org/Curriculum/SCAindex.htm> for K–5 teachers' use in differentiating reading instruction during this small-group work. The accompanying professional development materials and video clips address the complex undertaking of differentiating small-group instruction by breaking it into workable steps; the activities themselves provide teachers with hundreds of ways to engage both proficient and emergent readers in learning.

The *Student Center Activities* are organized according to the five essential components of reading instruction—phonemic awareness, phonics, fluency, vocabulary, and comprehension—recommended by the National Reading Panel (NICHHD, 2000). Each activity is introduced with an objective, materials list, and a clear description. In all, the SCA contains more than 500 reading-related games, hands-on projects, and other activities that students at all levels of proficiency can engage in to build their reading skills. A search engine, www.fcrr.org/SCASearch/, permits searches for activities by grade level and reading component.

Usable in any classroom and with any reading program that is based on the five components of reading, the activities target specific skills, scaffold student

learning, and provide engaging practice to extend student learning and increase the time students are involved in appropriate instructional activities. They focus on critical reading skills and are intended to be immediately useful to classroom teachers with students at all levels of reading proficiency. FCRR designed the activities in response to feedback and data gathered from schools that serve challenging student populations.

Research Base for Student Center Activities

A wealth of research on effective teaching supports increased instructional time, engaged time on task, specific teacher feedback, and active participation (Gettinger, 1984, 1985, 1989; Quartarola, 1984) as helpful in improving student achievement. However, research also suggests that before simply adding more instructional time, schools should make better use of existing time (Quartarola, 1984; Hossler, Stage, & Gallagher, 1988; Moore & Funkhouser, 1990; Taylor, Pearson, Clark, & Walpole, 2000; Taylor, Pearson, Peterson, & Rodriguez, 2003).

At the very least, schools must increase the proportion of time students are engaged in learning. This means:

- increasing the proportion of time students are involved in instructional activities;
- allocating adequate time to instruction in core academic subjects; and
- minimizing interruptions during engaged learning times so teachers can extend academic learning time (Aronson, Zimmerman, & Carlos, 1999).

Following explicit instruction, students need opportunities to practice skills and strategies in order to generalize the information (Adams, 1990; Snow, Burns, & Griffin, 1998). Cumulative review and practice help ensure that students remember the content over time, which increases the probability of their success (Kame'enui & Simmons, 1990). The *Student Center Activities* focus on important concepts related to the five components of reading and the instructional elements reading researchers have found to be effective (NICHD, 2000).

Student Center Activities can be an efficient and effective way to organize the classroom and plan instruction that meets the needs of all students. This is best achieved in small groups within which teachers can target specific skills and scaffold instruction. Small-group instruction has been found to benefit

student learning, especially for students struggling to learn to read (Foorman & Torgesen, 2001). *Student Center Activities* can engage students in reading-related instructional activities that are meaningful and motivating while other students are receiving small-group, targeted instruction.

Reading Centers

A reading center is anywhere that students engage in reading-related activities. It can be at a table or counter, on the floor, or in any other defined work area. If classroom space is limited, a large piece of tag board can be used as a portable work area.

Reading centers may be either teacher-led or independent student centers. In a teacher-led center, students participate in a lesson led by the teacher. They are grouped based on their progress monitoring scores; the teacher introduces appropriate new skills and concepts and guides students in practicing previously taught skills. Working with a small group allows the teacher to give students immediate corrective feedback, scaffolded instruction, and practice with targeted skills.

In an independent student center, students work individually, in pairs, or in small groups, to practice, demonstrate, and extend their reading skills. Reading center activities change frequently because they are based on student assessment data. The *Student Center Activities* offer a rich collection of resources for use at these independent centers.

It is important to pre-teach each activity before it is placed in a student center for independent practice. Activities can be pre-taught in a whole- or small-group setting, depending on students' needs and the complexity of the activity. Pre-teaching helps ensure students' success; in order for students to take best advantage of practice opportunities, they need a clear understanding of the task and clear expectations of the center management and organization.

Table 1 shows examples of Centers and Activities in different grades.

Table 1: Examples of Centers and Activities

Center	Activity
K–1 Phonological Awareness Center	Students segment and blend syllables in words using picture cards
2–3 Phonemic Awareness Center	Students decide which phoneme has been changed by comparing two pictures
2–3 Phonics Center	Students identify and sort different spelling patterns for long vowels by playing a card game
4–5 Advanced Phonics Center	Students make new words by combining words and inflections in playing a board game
K–1 Fluency Center	Students match initial sounds of words by playing a timed memory game
2–3 Fluency Center	Students time each other reading phrases and record numbers of correct readings
2–3 Vocabulary Center	Students complete analogies by playing a basketball game
4–5 Vocabulary Center	Students segment words into roots and affixes and brainstorm their meanings with a partner
K–1 Comprehension Center	Students arrange groups of words to make (both meaningful and silly) sentences
4–5 Comprehension Center	Students draw inferences by reading clue cards
K–5 Library Center	Students locate and organize information from leveled books and reference materials
K–5 Computer Center	Students interact with computerized reading programs targeted at their instructional level

HOW TO USE THE *STUDENT CENTER ACTIVITIES* MATERIALS

The home page for the *Student Center Activities* website (below, upper image) arranges the resources by grade level (K–1, 2–3, 4–5). Clicking on one of the three sections takes the user to a brief introduction, instructions for downloading the activities, a set of professional development videos, a *Teacher Resource Guide*, and activity plans for each component of reading at each grade level.

Each activity plan (below, lower image) explains the instructional target and directions for conducting the activity. Tools such as word cards or game boards (activity masters) needed to implement each activity are also included.

Additional supports include introductory slide presentations on the *SCA* home page and step-by-step professional development in video (DVD) form. Used along with the *Teacher Resource Guides*, the videos answer frequently asked questions, describe how to implement small-group arrangements, and explain how to use the activities to reinforce previously taught skills.

Inside the Teacher Resource Guides

In addition to covering all of the video content, the *Teacher Resource Guides* also contain “crosswalks.” Created by FCRR (Magill, Kosanovich, and Weinstein, 2007, 2008a, 2008b), these crosswalks align each student activity with its corresponding reading subcomponent and the relevant DIBELS measure and Florida state standard. If schools use the DIBELS measures, the crosswalks will be helpful in aligning assessment with instruction. Adaptable electronic tables of the three crosswalks (K–1, 2–3, and 4–5), which may be used to align the SCAs to any state’s standards, are available at the COI website, www.centeroninstruction.org; a print version appears in this document’s appendix, page 13. Each crosswalk orders activities from simpler to more complex skills within each reading component and allows teachers to target specific skills their students need to master based on grade-level standards or other measures.

The *Teacher Resource Guides* also include a glossary of reading terms, research notes, references, and resources to support foundational knowledge of the reading process.

The content in each *Teacher Resource Guide* is similar but has been adjusted for use in K–1, 2–3, and 4–5 classrooms. All three contain grade-level “frequently asked questions” with answers about student reading centers and reading instruction, define key terms, and guide teachers in creating effective student centers, including computer-based centers.

The treatment of the five essential reading components changes with each grade-level set. The K–1 Phonological Awareness activities, for example, involve work with rhyme, alliteration, sentences, syllables, and onsets and rimes as well as phonemic awareness activities at the individual sound level. Grade 2–3 activities focus only on the phonemic level, so the component is titled Phonemic Awareness. The grade 4–5 activities contain neither phonological nor phonemic awareness activities. However, many phonemic awareness activities included in the K–1 and 2–3 sections can be easily adapted for older students by a skillful intervention teacher who understands the role of phonemic awareness in acquiring phonemic decoding skills. Such a teacher can offer error correction and explanation while the student is learning to use letters to represent sounds in words.

Similarly, the phonics component varies. While many students in grades four and above are proficient readers of single-syllable words (e.g., *split*, *grand*,

more), they encounter increasing numbers of multisyllabic words (e.g., *pretend*, *sufficient*, *multiple*) in texts. This may present greater challenges (Archer, Gleason, & Vachon, 2003). Instruction in word analysis and word recognition can benefit students who have difficulty at this level (Wexler, Edmonds, & Vaughn, 2008); such activities are found in Advanced Phonics in the 4th- and 5th-grade SCAs.

Implementing and Managing Student Centers in the Classroom

The *Teacher Resource Guides* describe two management systems, one for managing homogenous groups throughout the centers, and the other for managing homogenous groups at the teacher-led center and heterogeneous groups at the student centers. The *Guides* also include information about when each system is appropriate.

The *Teacher Resource Guides* detail the eight critical steps in planning, implementing, and managing *Student Center Activities* effectively in the classroom:

1. Form flexible groups based on assessment;
2. Identify appropriate center activities based on assessment;
3. Design a center management system;
4. Implement a behavior management system;
5. Give explicit center directions;
6. Organize the classroom;
7. Manage transitions; and
8. Establish accountability.

Because the *Student Center Activities* were initially developed for Florida schools, discussion of the first step ("Form flexible groups based on assessment") refers to progress-monitoring used by the state of Florida. Data from a Florida classroom provided in the *Teacher Resource Guides* are used to show how to analyze student data and organize students for small-group instruction. This example may serve as a model if a state does not have its own required progress monitoring or use a common data management system. However, if a state uses required progress monitoring and employs a common

data management system, those state assessments and data systems should replace the examples in the *Teacher Resource Guides*. In either event, this step should not be ignored or overlooked. Determining how to group students so that they are appropriately challenged depends on effective—and ongoing—progress monitoring of student skills.

If schools—and, by extension, states—are to realize the national goal of “all children reading well by third grade,” strenuous efforts must be made to bridge the gaps in skills that early readers bring to the classroom. Differentiated instruction, by targeting the learning needs of every student, will play a major role in these efforts. The *Student Center Activities* offer plentiful material for differentiating reading instruction in the elementary grades.
